

stillcore capital

The First U.S. Liquid Venture Fund for Decentralized AI

Confidential | 2026 | For Qualified Investors Only

Stillcore Capital: Decentralized AI

Structurally undervalued. The most asymmetric opportunity across both AI and blockchain

The Thesis:

- We believe decentralized AI is where decentralized finance was in 2016
- Bitcoin decentralized money. Ethereum decentralized finance. Bittensor (TAO) is decentralizing intelligence

Why Now:

- Open-source AI has reached near-parity with closed-source labs
- The early 1990s internet parallel is playing out in real time: it appears AI is converging on an open-source substrate
- We believe decentralized AI & Bittensor are at the convergence of two historic catalysts: a Bitcoin-style post-halving supply shock and an Ethereum-style “subnet ICO moment”

What Stillcore Does:

- U.S. fund providing institutional-grade exposure to decentralized AI, with an initial focus on Bittensor (TAO)
- We acquire and stake TAO, earn protocol yield, and invest in high-conviction AI subnets (decentralized AI startups)
- No wallets, no custody, no staking for LPs

Why It Matters:

- We believe this is the largest opportunity within both AI and blockchain globally
- Bittensor is redefining blockchain itself, from coordinating money and finance to coordinating intelligence. We believe this has the potential to be the biggest story in crypto since Ethereum
- A tiny fraction of the world grasps the significance of decentralized AI, producing generational information asymmetry
- Every prior blockchain application coordinated money or speculation. Bittensor coordinates intelligence. We believe this is crypto's iPhone moment

Two Exponential Forces Are Converging

Open-source AI nears parity with closed labs. Blockchain enables global trustless coordination. Bittensor unites both

AI is Advancing Exponentially

- Open-source models are closing the gap with closed-source labs (OpenAI, Anthropic, Google)
- AGI forecasts are accelerating: 1-3 years. Intelligence as capable as a human remote employee

LLaMA
by Meta

KIMI

Blockchain Solves Coordination at Scale

- Bitcoin proved global, trust-free value can be secured by decentralized compute
- Ethereum proved anyone can deploy trust-free, programmable logic ("smart contracts")
- Bittensor proves decentralized networks can train and reward collective AI

bittensor

Bittensor = Blockchain x AI Gold Standard

- Connects GPUs & AI developers from around the world to innovate & produce open-source AI
- Tens of thousands of participants from major corporate labs & global machine learning PhDs are all actively building in the Bittensor ecosystem`
- The result? A global marketplace and internet of intelligence, that is just now reaching its inflection point

Stillcore's Partners

Founding partners bring complementary networks and expertise across AI, blockchain, and traditional capital markets

[Rob Greer](#)

- Serial entrepreneur with investment banking and private equity background
- Former investment banking at BofA Merrill Lynch; PE investor at Martis Capital
- Architect of Stillcore's decentralized AI thesis and investment strategy
- Early Bittensor participant (2023); decentralized AI thought leader on X (2024)

[Mark Jeffrey](#)

- Former Founder & CEO of Guardian Circle (Newsweek Blockchain Impact Award '19)
- Co-founder of ZeroDegrees, acquired by IAC
- Early Bitcoin adopter (2013); Ethereum ICO investor at \$0.33; longtime advocate of open-source financial systems
- Host of The Hash Rate, the largest Bittensor-dedicated podcast globally (150+ episodes)

[Jason Calacanis](#)

- 300+ angel investments including Uber at \$5M valuation, Robinhood, Calm, Superhuman, and DataStax
- Host of This Week in Startups, one of the longest-running tech podcasts globally
- Founder of LAUNCH and the LAUNCH Accelerator (300+ startups supported)

Bittensor's Rise, Meta's Llama Goes Cloud, & AI Now Writes Your Code | E2119

This Week in Startups
324K subscribers

153K views 3 months ago This Week in Startups
Today's show: Jason, Alex, Lon and Special Guest Mark Jeffrey of Hash Rate, cover the explosive rise of Bittensor, a decentralized AI compute network some are calling the "third great coin" after Bitcoin and Ethereum, explore Meta's bold move to host its open-source LLaMA models via partnerships with Groq and Cerebras—potentially setting the stage for a future AWS competitor—and unpack shocking revelations from the Wall Street Journal about Meta AI chatbots engaging in inappropriate conversations with underage users. Plus, we explore how AI is now writing up to 30% of code at major tech firms like Google and Microsoft, signaling a radical shift in how soft...more

Your Access Point to the Decentralized AI Revolution

Four structural advantages no passive holder or generalist fund can replicate

1

Subnet Selection, Not Passive Exposure

- Actively manage positions across decentralized AI infrastructure & applications, staking, and ecosystem opportunities
- Continuous portfolio optimization through subnet selection, rotation, and real-time ecosystem intelligence

2

Proprietary Deals & OTC Discounts on Day One

- Deep relationships across the decentralized AI ecosystem, sourcing deals unavailable to outside investors
- Private, over-the-counter (OTC) deals with founders, generally at ~35% discounts to market, generating value accrual for LPs and our fund NAV on day one

3

Institutional DNA in a New Category

- Investment banking and PE backgrounds: risk management, reporting, and compliance from day one
- Hands-on operational support for portfolio companies: go-to-market, tokenomics, and growth strategy

4

Platform & Information Asymmetry

- Jason Calacanis (TWIST) and Mark Jeffrey (Hash Rate) provide unmatched media reach, accelerating portfolio company adoption
- 99% of institutional investors have never heard of decentralized AI; by the time this is consensus, the window will have closed

How We Generate Returns & Manage Risk

Three sources of return, institutional risk management, and turnkey LP access

1

TAO: The Reserve Asset

- TAO is the native coordination asset for the entire Bittensor network
- Every subnet must trade against TAO, creating structural demand
- Staking TAO generates protocol yield (~5-7%)
- Provides foundational exposure to the aggregate success of decentralized AI

2

Subnet Alpha & Decentralized AI Expansion

- Initial focus on Bittensor, the largest and most mature decentralized AI ecosystem
- Active selection of high-conviction AI subnets
- OTC deals generally at ~35% discounts to market, generating NAV accretion on day one
- Systematically expanding to capture alpha across the entire decentralized AI category as the space matures
- All positions maintain on-chain liquidity for active portfolio management

3

Turnkey Access for our LPs

- No wallets, no custody, no staking required
- Institutional-grade reporting, compliance, and risk management from day one
- Open-end structure: new LPs enter at current NAV at today's prices

Risk Management

- No single subnet position exceeds a defined % of NAV
- TAO core allocation provides structural downside protection and built-in ecosystem diversification
- Portfolio actively rebalanced in response to volatility, liquidity conditions, and thesis evolution
- Drawdown management and concentration limits enforced across all positions

TAO Is Where BTC & ETH Were Before Biggest Moves

TAO is tracking the same early-stage trajectory as the two most valuable blockchain networks in history

Key Statistics

128
Subnets Live

~2bn
\$TAO Market Cap

20k Accounts (Q1 '23)
450K Accounts (Q1 '26)

Early-Stage Trajectory

\$2bn today
2026 market cap

\$2bn
2013 market cap

\$2bn
2016 market cap

Why This Matters

- TAO trades at a comparable market cap to where BTC and ETH were at similar stages of ecosystem development, but with significantly faster traction

Compounding Network Effects

History Rhymes: Post-Halving and Post-ICO Precedent

TAO's first halving and its Ethereum ICO-style subnet moment may be converging in the same time window

Bitcoin: Post-First Halving (Nov 2012)

Ethereum: Early Ecosystem to ICO Boom (Jan 2017)

TAO = Simultaneous Supply Shock (Halving) + Demand Shock (ICO Moment)

Note: Historical comparisons are provided for illustrative purposes only and do not imply that TAO will follow similar price trajectories. Bitcoin and Ethereum operated in fundamentally different market conditions, regulatory environments, and adoption cycles. Past performance of other digital assets is not indicative of future TAO performance. These comparisons are not projections or forecasts.

Where Global AI Builders and Agents Are Converging

Open-source AI captured ~50% of the market by offering near-parity quality at a fraction of the cost. Bittensor applies the same force to every AI vertical, while creating a network where AI agents are economic participants

The Precedent

- Open-source models (Qwen, DeepSeek, Kimi) captured ~50% of the AI model market
- The value proposition: 80–100% of the quality for ~10% of the price
- Result: permanent compression of the frontier model layer (OpenAI, Anthropic, Google)
- This same dynamic is now playing out at the application layer through Bittensor subnets

Why Bittensor Wins

- Bittensor financially incentivizes tens of thousands of GPUs and developers (both human & AI) worldwide to build open-source AI in one place
- Subnets offer the same value proposition: near-parity quality at a fraction of the cost and overhead
- Every subnet token requires TAO to purchase, creating structural buying pressure as the ecosystem expands
- As subnets scale from 128 to 1000s, all market cap from that innovation accrues to TAO

We believe Bittensor is emerging as (1) the most attractive place in the world to start an AI company and (2) the most attractive place for AI agents to accumulate capital via mining and subnet creation

The Mispricing of Decentralized vs. Centralized AI

\$1.5 trillion in market cap across just three frontier AI labs. The entire decentralized AI category: \$15 billion

The 100x Valuation Gap: \$1.5tn Centralized AI vs \$15bn Decentralized AI

This comparison includes only three centralized frontier AI labs. The broader centralized AI startup ecosystem is dramatically larger and is the true apples-to-apples comparison

¹Source: CoinGecko, as of 3/4/26

The Decentralized AI Valuation Gap

Stillcore's portfolio companies are building comparable products to web 2 unicorns at a fraction of the market cap

Relative Market Cap / Valuation

<u>Decentralized - TAO Subnets</u>	<u>Centralized – Web 2 AI Startups</u>
Ridges (SN62) ~\$30M	Cursor ~\$30B <u>Valuation Gap: ~1,000x</u>
Chutes (SN64) ~\$80M	CoreWeave (CRWV) ~\$40B <u>Valuation Gap: ~500x</u>
Hippius (SN75) ~\$25M	Dropbox (DBX) ~\$8B <u>Valuation Gap: ~320x</u>

Stillcore holds positions in all three subnets.

These are real products competing with multi-billion dollar incumbents at a fraction of the cost and valuation

Decentralized AI vs. Other Blockchain Categories

Real utility and infrastructure remain structurally undervalued relative to speculative categories

We believe decentralized AI is as big an opportunity as decentralized finance (if not larger)

Bittensor is a gold standard Blockchain x AI protocol

¹Source: CoinGecko, as of 3/4/26

Let's Discuss

We believe the current market environment presents a generational opportunity to access the decentralized AI economy at deeply discounted valuations
